

# WINETEMPLE

# A full range of options for your winetemple

## **Uncompromising wine storage**

Do you want your dream to come true: to possess your very own wine cellar? Do you want to transform, convert, or enlarge an already existing cellar? If so, please take advantage of our range of products in order to equip your winetemple. Rundumwein's expertise and experience in this field date from 1978.

ARCave offers a variety of well-designed, original options that will enable you to make your winetemple just as you always imagined it, both inside and outside. Whether you prefer a traditional or modern style, we propose storage systems adapted to every taste.

## **Choose your favourite design!**

# SANDYLINE TUFF

## Obvious advantages:

- 5 different modules
- a bed of sand adapted to all sizes and shapes of bottles
- an ideal micro climate thanks to tuff columns
- improved temperature control thanks to the thermal mass
- bottle shelves and sand included
- simple construction

SandyLine shelf units are delivered with a layer of sand – a world exclusivity. When combined with tuff, they ensure perfect atmospheric humidity.

## A totally original storage system

In order to adapt to all shapes of bottles, only carefully selected materials are used: golden sand (without dust) inside a modular shelf system open at the top. Reminiscent of a sanctuary, these shelves come with tuff columns.

Made of naturally solidified volcanic ash, Sandyline tuff is highly efficient in regulating humidity.

Design made-to-measure shelf units in a jiffy with our interactive CAD tool at [www.winetemple.com](http://www.winetemple.com)!

# SANDYLINE KIT

## Obvious advantages:

- 5 solid natural stone modules
- individual bottles can be stored in columns
- a bed of sand adapted to all sizes and shapes of bottles
- improved temperature control thanks to the thermal mass
- bottle compartments and sand included
- simple construction

## Exclusive and noble

ARCave presents an innovative new variation of the famous SandyLine Tuff series: the SandyLine Kit enables individual bottles to be stored in lateral columns. Two compartment formats are available.

This premium shelf system contains a layer of golden sand able to adapt to all bottle shapes.

Take advantage of the exclusive SandyLine system!

# MULTI

## Obvious advantages:

- 8 different modules for tailor-made cellar layout
- an ideal micro climate thanks to porous material
- practical partitioning and convenient bottle compartments
- improved temperature control thanks to the thermal mass
- simple construction and extendability

## Traditional bins for the discerning connoisseur

This system of modular compartments is an ARCAve classic.

The MULTI system consists of 8 different types of compartments in traditional, functional shapes conducive to an infinite number of combinations. This system was introduced by ARCAve over 20 years ago and is still very popular.

The compartments are made of burned clay that absorbs hygroscopic moisture and releases it when the air is too dry. Shelf indentations are adapted to wine bottles and prevent any movement.

Design made-to-measure shelf units in a jiffy with our interactive CAD tool at [www.winetemple.com](http://www.winetemple.com)!

# HYDROTON

## Obvious advantages:

- 7 different types of modules
- angle shelf units make optimum use of available space
- an ideal micro climate thanks to porous material
- improved temperature control thanks to the thermal mass
- modules with large compartments that are ideal for the restaurant trade
- compact, easy to transport

## A bin system for fine restaurants

This affordable, attractive modular system makes maximum use of space and is especially well-adapted to the needs of restaurants. The porous natural stone (burned clay) ensures an appropriate micro climate for wine storage. The Hydrotone units absorb hygroscopic moisture and release it when the air is too dry. This contributes greatly to maintaining stable atmospheric conditions.

Your special bottles can be easily housed and arranged in columns.

# CAVO

## Obvious advantages:

- 4 different modules
- natural stone
- improved temperature control thanks to the thermal mass
- shelves and compartments specially designed for wine bottles
- unbeatable price and efficiency
- simple construction

## Traditional bin system for any cellar

The Cavo collection consists of ideal all-purpose wine bins. Cavo shelving units are the most widely-used and popular storage system, suitable for even the most demanding wine lover.

The classic design speaks for itself and sets this system apart from all others. The traditional H-shaped configuration immediately shows this to be an ARCAve creation.

Made of natural stone and extremely solid, Cavo is the ideal complement to an existing wine cellar.

# UNO

## Obvious advantages:

- a modular system
- improved temperature control thanks to the thermal mass
- specially designed for wine bottles
- unique unbeatable price and efficiency
- curved compartments
- simple to stack
- sturdy construction and remarkably simple

## Simplicity at its best

These simple, very functional bins are at home in any cellar.

Uno is a single unit shelving system made of natural stone and it sports an attractive curved form that is simplicity at its best. It offers improved temperature control thanks to its thermal mass.

Ideal for wine lovers who appreciate most simple functional solutions.

# CAVINO

## Obvious advantages:

- 3 well-adapted clay modules
- improved temperature control thanks to the thermal mass
- optimum microclimate thanks due to the clay used
- curved bottle shelves
- simple construction

## Naturally in clay

A new element has been added to the popular Cavino collection, a remarkable combination of tradition and modern contours.

Cavino shelves are composed of granulated clay whose natural properties help preserve wine. Your precious bottles are stored in beautifully vaulted shelves. Practical use, quality and a decorative appearance will delight every wine enthusiast.

## COLLECTION-RACK 90

### Obvious advantages:

- sliding trays
- created to hold 90 individual 0.75 standard bottles
- bottles are easy to see and very accessible
- a secure place for every bottle
- ideal for flute shaped bottles (ie. Alsatians, German Rieslings etc.)

Please go to the next page to see systems with either one or two (top to tail) rows per tray that adapt to various types of bottles.

### A wine tower for your individual bottle collections

Thanks to an exclusive system of sliding trays, all your bottles are easily accessible and stored with maximum security. The Collection Rack 90 was designed to display and store 90 bottles in single rows. Furthermore, it can easily be combined with our natural stone modular units due to its adapted depth. Thanks to specially-designed sliding trays, labels and vintages are easily visible without having to handle the bottles.

A depth of 35 cm means that no bottle is too tall to fit on the tray.

## COLLECTION-RACK

### Obvious advantages:

- sliding trays adapted to various shapes of bottles and cases including magnum and splits
- bottles are easy to see and very accessible
- possibility of putting names on the magnetic band
- specially designed for wine bottles
- ultra-simple modular construction

### For your vertical and horizontal collections

Thanks to sliding trays with practical handles, CollectionRacks are the ideal, stylish solution for keeping single bottles. What wine lover does not want to store his last bottle of 1983 La Mouline under the best possible conditions? This is the perfect way to store and present your vertical collection of Bonne Mares or Mouton Rothschild. Your unique bottles will be well-protected.

CollectionRack lets you arrange your collection the way you want, and find every rare bottle without having to move others whether that be magnum, standard bottles or splits (0.375).

# RAUMFORMER

## Obvious advantages:

- enhances the beauty of every room
- dry installation
- hides intake and exhaust pipes
- minimum required room height: 2.35 m

## The ideal ceiling profiles for an existing wine cellar

Raumformer quickly and simply transforms your wine cellar into a veritable sanctuary, at a reasonable price. Raumformer ceiling profiles improve air circulation and prevent stagnation in angles. The profiles are designed to leave enough room to install intake and exhaust pipes for air conditioning, ventilation, lighting etc.

Raumformer ceiling profiles add a luxurious atmosphere to your cellar.

# THE ULTIMATE WINETEMPLE IN ROYAL TUFF

## Obvious advantages:

- can be installed in an existing building
- ideal for incorporating into interior design projects
- constructed by our specialists
- turnkey delivery (Switzerland exclusively)
- top notch air conditioning system (optional)

## A winetemple to store the treasure of kings

„Royal tuff“ is a stone reminiscent of castles, knights, wine temples, Dom Pérignon, the great Chenin Blancs, truffles and many other things. As soon as they became familiar with its properties and beauty, tuff became the preferred building material of kings.

ARCave temples are made with royal tuff, a stone formed by layers of sediment going back 90 million years. This new form of shelving unit stems from a very old tradition: ageing wine in white tuff. ARCave now offers a temple of wine made out of this noble material, whose beauty and good taste transcend trends or fashions.

Design made-to-measure shelf units in a jiffy with our interactive CAD tool at [www.winetemple.com](http://www.winetemple.com)!

# ARCAVE VAULTED CELLARS

## Obvious advantages:

- thermoactive and anti-bacterial characteristics, regulates temperature and humidity (energy saving) due to the use of clay
- attractively priced: quick and inexpensive to build thanks to prefabricated elements
- built to order  
(please refer to the measurement charts on [www.arcave.ch](http://www.arcave.ch))
- a complete programme of vaults
- arches without angels, so air can not stagnate and encourage mould in the corners!

Please consult our Website [www.arcave.ch](http://www.arcave.ch) or contact us for further information.

## An ancestral vaulted cellar for the twenty-first century

An increasingly large number of people appreciate fine wine and have become very knowledgeable about it. However, many of them do not have a place to store wine. The cellars in modern buildings are hot and dry. The only satisfactory solution for wine lovers is to have a cool, humid cellar. It is easy to build an ARCave cellar next to your house, underneath the garden.

ARCave vaults are made to order in our factory and can be installed on-site in 2 to 3 hours. Clay, the most natural building material on earth, has the amazing ability to regulate temperature and humidity. It thus creates an excellent microclimate in ARCave cellars.

## ACCESSORIES

### Add atmosphere to your winetemple!

ARCAve also offers a range of accessories to enhance your temple of wine and attain perfect storage conditions.

Brochures available on request.
